Continuation of 5. does NOT place the application in condition for allowance because: Prior art teaches disabling a normal incoming packet procedure in response to the level of the packet queu. As Edholm notes at [0029-0030] when the bandwidth limitations have been exceeded, the control waits(disablling normal incoming packets) before placing the data packet on the transmit queue else when the bandwidth llimitains have not been exceeded, the control releases (enabling alternate incoming packets). Furthermore, Edholm notes at [0026-0028]. Packets are selected on the basis cirteria of associated quality of their source adddress relative to currently prevalent threshold(this implies enabling alternate incoming packet procedure). Thus, prior art teaches the invention as claimed and the claims do not distinguish over the prior art as applied.
